<b>Goals</b>	Successfully using the scrum framework to create a software that is complete, has no bugs, doesn't break and fulfills all given requirements.		Signature
<b>Meeting norms</b>	Wednesday meeting is mandatory for everyone, other separate meetings for the people involved (may vary). Being on time is mandatory. Delays or no-shows (e.g. sickness) have to be announced ASAP, at least before the start of the meeting. Team meeting should be structured and held according to SCRUM. Actual work has to be done during the sprint and/or in separate meetings.		Florian Schels
<b>Working norms</b>	criticism only on professional level; try to solve issue directly, if not possible contact the SM, if still no solution make it part of the team meeting		Maximilian May Andreas Hellmich
<b>Coordination norms</b>	Agree with FS and AM. POs responsible for technical coordination, SM responsible for ideal implementation of SCRUM Framework and team issues. Ideally SM involvement declines over time. If Meeting is requested by SD to solve misunderstandings they should select the Meeting leader		
<b>Communication norms</b>	Informal communication via Whatsapp. Technical communication via Slack. Respond within 24h max (and if it's just "I'll look into it at x"); Communicate illness/delays once noticed; If anything is not clear, communicate that immediately.		
<b>Consideration norms</b>	no side conversations during meetings		Tejesh Pala
<b>Cont. improvement norms</b>	team progress is tracked using project board. Impediments backlog is discussed in team meeting.		Uday Varun Kothapalli
<b>Rewards</b>	If sprints are successful, no additional meetings are necessary ;)		Tariq Hussain Magsi
<b>Sanctions</b>	No Sanctions for now - might be added later"		Fazeel Arif

Product Vision	Project Mission
<p>The EMBA environment helps IT-Security professionals to get an easy and uncomplicated overview over vulnerabilities in firmware files. Its analysis process is started by an automated download of firmware files, which then are investigated for vulnerabilites. Users can acces EMBArk, a webbased dashboard, in order to obtain insights into the results. The whole product is based on a modular structure so only a part of the functionalities can be used, as well as the selection of vendors can be limited or easily expanded by adding additional modules.</p>	<p>The mission of this project is to create a fully automated and modularized firmware crawler, that can crawl vendor websites regularly and unsupervised for previously unknown firmware images.</p> <p>The found images are then added to EMBArk, where the vulnerability analysis is executed, logged and visualized.</p>

Questions for additional Teammeeting		
1	How to install Embark if someone don't have Kali Linux?	<p>Use Kali Linux inside a VM; if necessary Andreas can provide help with setting up a Hyper-V VM</p> <p>You might get it to run in other Linux-Distributions, but a Kali VM is the way to go</p>
2	If someone stucks in programming of this software who will guide us?	Normally all coding related tasks are responsibility of the SDs. Please discuss problems with the other SDs first. However if the problem persists, we can of course also discuss them in the teammeeting or in a separate meeting and find a solution or workaround all together.
3	Who will check the code after implementation?	Release manager checks quality of the code before the teammeeting and has to ensure that everything is running as expected. POs confirm the features in the Sprint Review.
4	Do we also build a UI	No, EMBARK is the UI
5	How do we maintain the MySQL based DB for our Project?, Is it in a Server or a memory location in a file system?	As per Industry Partner, the database will be made available offline so a sqlite library will be used based on intial setup
6	Can this be maintained in an Excel output or JSON or yaml or a db access file in local file system?	The database uses a local .db extension file which will be used by SQLite and an internal library of Python
7		

No.	Sprint	Impediment	Explanation	Solution	Source	Status
1	2	Uneffective Teammeeting	Poor participation in the discussions	Turning cameras on. Improve Team spirit.	Max	approached
2	2	Lack of communication during Sprint		Finally everybody joined slack. Explanations and motivational email hopefully helped.	Max	approached
3	2	No tasks have been done		Clearly worded email by SM to point out issues and motivate everybody.	Max	solved
4	2	Lack of understanding duties and SCRUM Framework	Way too many questions, which should have been clear for a long time	An additional, not mandatory meeting was held where SM and POs offered to answer remaining questions. Nobody showed up, but previously handed in questions have been answered. I expect fully working processes and teammeetings from now on.	Max	approached
5	2	Unorganized and uninformed teammembers	Too many questions regarding links, documents etc.	Please organize yourselves. Set up folders and bookmarks for all the information and documents we need in this project.	Andreas	approached
6	3	Unprepared Release Manager	This Impedimence illustrates the lack of understanding of the SCRUM Framework as well as the planning (and all other) documents by SDs.	See Impedimence 4 and 5. Issue has been discussed in team meeting and feedback email. I expect that this will not happen again.	Max	solved
7	3	Very late commits; unsigned commits	If you commit your work 30 minutes before teammeeting there is no time for the release manager to prepare a working demo. If you dont sign your commits, the teaching team does not know who did the work.	Issue has been discussed in team meeting and feedback email. Solution should be obvious, please organize your tasks and duties together as SDs.	POs	solved
8	3	Meeting takes too long	1) Little tasks requested by SM/POs during meetings (f.e. in Retro) take too long. 2) Sprint review takes too long.	1) We still need better participation in the teammeeting. 2) Please try to quickly present your key results and be ready to share your screen.	Max	approached
